About the smell of disposable diapers

30-April-2013

ATTN: MIR DETSTVA CO., LTD

19 LENINSKAYA SLOBODA STR., 115280, MOSCOW, RUSSIA.

A disposable diaper has a specific smell. There is one of diaper's materials, hot melt (adhesive stuff used for sealing). It seems that hot melt's own odor causes a diaper's specific smell.

We have confirmed the safety of all materials with respect to the human body, and we regularly have a safety inspection for all the materials when we carry them into our factory, and carry them out from our factory. Accordingly, we are sure that the smell of the material of the diaper does not affect the human body.

In addition, these materials have a tendency of absorbing odor and moisture of the ambient air.

The package of the diaper is not completely sealed because it has some air vent holes for preventing ruptures, and perforations which enables users to open easily.

For this reason, there is a case to absorb moisture and an odor of a warehouse, distribution process, house and so on.

We are trying to improve the situation.

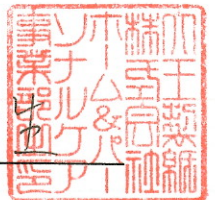

Thank you for doing business with us.

Sincerely Yours,

30-April-2013
